

CPI Daylighting Inc. Featured Project

Amarillo Airport Walkway

CPI installed a 400 linear feet Clearspan (CRP) Walkway in Amarillo, TX,

linking the airport terminal to the rental car parking garage.

According to Richard McConnell, Assistant Manager at Amarillo Airport, the airport had been planning the project since 2001. The Architect for this project, Michael Spitzer of Reynolds, Smith & Hills, Inc., out of Jacksonville, Florida, came up with a unique design solution to make the vision of the airport a reality. One of the main purposes of the walkway was to protect people from the elements. CPI's product was what they were looking for. CPI was specified and the bidding process went smoothly. This was a good example of using CPI's CRP walkway system in a specific design.

"Not only is it our CRP walkway system from the ground up, but we had to incorporate several other third party materials".

-Luke Legrand
Conner-Legrand Inc.

"Not only is it our CRP walkway system from the ground up," stated CPI sales representative, Luke Legrand,

"but we had to incorporate several other third party materials. The fact that the walkway roof is translucent glazing on a radius is really special and unique". CPI used glass and louvers to meet the specific design, the appearance, & the functionality. McConnell stated, "Now that it is com-

plete, we are very happy with it. Airport passengers and workers are pleased that it has been installed, & the walkway is performing as advertised". Spitzer was also very pleased with the final result.

"Now that it is complete, we are very happy with it. Airport passengers and workers are pleased that it has been installed, & the walkway is performing as advertised".

- Richard A. McConnell
Assistant Manager,
Amarillo Airport
